

Item No.29 FRONT SHOCK ABSORBERS - P.B. MODELS.

From engine no. ED/PB/9877 a new type front shock absorber has been fitted to Javelin cars. These units incorporate a redesigned lower fixing arrangement which reverses the position of the shock absorber buffer as shown in the sketch below.

It will be noted that the buffer assembly is cut away to provide clearance for the stub axle in the rebound suspension position.

This shock absorber is not fully interchangeable, but may be fitted to previous models by changing the parts as detailed in Note 52 of the Spares Section of the Bulletin.
